Dublin Steak Study 2026: full methodology and data

Steakhouse Dublin (steakhousedublin.ie) · Published November 2026 · Search data Nov 2025 to Oct 2026 · Menu prices checked November 2026

This document backs up the article "Dublin Searches for Steak 91,000 Times a Year". It lists every keyword template, every city figure, every restaurant price used and every source, so anyone can check or repeat the study. The figures are estimates; see section 6 for how to read them. Every keyword and its volume in both tools is in the companion data file: dublin-steak-study-2026-keyword-data.csv.

Key findings. Dublin had about 90,900 steak-restaurant searches in the year to October 2026, 75% of the Irish total. It ranks 10th of the 34 European cities measured (660 a year behind Hamburg, ahead of Amsterdam, Vienna and Edinburgh), and 12 US cities search more, with Dublin level with Denver. Per 100g, steak at the Dublin steakhouses checked costs less than at top European or US steakhouses on every cut: ribeye €15.18 vs €16.69 vs €17.80; sirloin/strip €14.29 vs €16.57 vs €17.85; fillet €19.55 vs €20.17 vs €27.75 (US before tax and tip).

1. How the search figures were built

We measured searches for steak restaurants by category only. **Restaurant-branded searches were not used**: a search for a steakhouse by its own name (for example "Hawksmoor Dublin" or "FIRE steakhouse") is not counted in any city. Recipe and butcher searches were also left out. Each city was measured in its own country database (Ireland for Irish towns, UK for UK cities and so on), so the figures reflect local searchers rather than tourists searching from abroad.

Keyword templates

Each city name replaces {city}. The same 13 English templates were used for all 71 cities. Non-English cities also got four to seven local-language templates (more in bilingual Brussels and Barcelona), and the English templates were run with the local spelling too: München, Köln, Zürich, Wien, Roma, Milano, Lisboa, Praha, Warszawa, København, Bruxelles and Brussel. In all, 1,253 keywords. New York also includes "nyc".

Excluded: "bistecca {city}" in Italy (it also matches recipe searches for bistecca alla romana/milanese) and the Spanish *asador* and *parrilla*, which cover all grill and roast-meat restaurants. "steak restaurant in {city}", used only for Irish towns in the first version of this study, was dropped so every city has the same English set.

Steps

• **Ahrefs.** Keywords Explorer (API) returned a 12-month average volume for every keyword in the city's country database, pulled 25 Nov 2026. City total = sum of all keyword volumes.

• **Semrush.** Keyword Overview, Bulk Analysis (browser), in the city's country database, pulled 25 Nov 2026. Semrush often gives near-identical keywords one shared "cluster" volume, so keywords were split into three groups (English head terms; English "best" terms; local-language terms) and only distinct values were added within each group. A local-language term that Semrush shows without intent data (n/a) and with exactly the same volume as an English head term was treated as the same cluster and not added again. Example, Dublin: head terms all 8,100; best terms 720, 320 and 170; total 9,310 a month.

• **Combine.** City monthly figure = (Ahrefs total + Semrush total) / 2.

• **Annual.** Both tools report a 12-month average, so annual = monthly × 12, covering November 2025 to October 2026. Check: Ahrefs' month-by-month history for Dublin's 13 keywords summed to 68,428, against 70,080 from average × 12 (within 3%).

• **Rank.** Cities were sorted by annual searches within each region. All 71 cities were checked in both tools with the same keyword set.

• **What changed from the first version.** The first draft used 10 English templates and one to three local terms per country. Adding the English "best steakhouse/best steak restaurant" terms and more local-language terms raised most cities. Dublin went from 84,180 to 90,900 a year but moved from 6th to 10th in Europe and from 8th to joint 13th against US cities, because German, French and Spanish cities and US "best steakhouse in..." searches gained more.

Dublin and Denver tie on 90,900. Rankings within about 5% of each other (for example Munich to Amsterdam in Europe) should be read as effectively level. The two tools disagree most for Barcelona (Ahrefs 1,950 vs Semrush 15,910 a month) and New York (18,670 vs 49,950). Search tools estimate volume, so treat all figures as indicative.

Dublin’s rank by tool

We use both tools because each models search volume differently, and neither is right on its own. Ranking Dublin on each tool separately shows how much the method matters:

Comparison	Ahrefs only	Semrush only	Average of both (used in the study)
Europe (34 cities)	5th (5,840 a month)	12th (9,310 a month)	10th (7,575 a month)
Against US cities (22 incl. Dublin)	11th	14th	Joint 13th with Denver
Ireland (17 towns)	1st	1st	1st

Why the tools differ for Dublin. Ahrefs gives each Dublin keyword its own volume (steakhouse dublin 1,600, steak restaurant dublin 1,300, steak house dublin 600 and so on), so its total is a straight sum. Semrush groups Dublin’s seven head terms into one shared “cluster” volume (8,100 each), which the de-duplication rule counts once. In many other cities Semrush returns separate values for the same terms, which add up. This probably makes the Semrush figure, and so the combined figure, slightly understate Dublin compared with those cities. We kept one rule for every city rather than adjust Dublin alone, and show both tools here so readers can judge.

Seasonality: Dublin keywords, Ahrefs month by month

Peak November (6,821), low May (4,863), a 40% swing. Ahrefs only, so lower than the combined figure.

4. Restaurant prices

Selection. No Irish restaurant is in the World's 101 Best Steak Restaurants 2026, so for Dublin we used the steakhouses named across Lovin Dublin, DublinTown and Restaurants for Kings (2026), covering premium and mid-market price points. For Europe and the US we used the highest-ranked entries in the World's 101 Best Steak Restaurants 2026, plus one mid-market benchmark in each (Block House Berlin; Hawksmoor Chicago, which matches Hawksmoor Dublin and London).

Rule. A restaurant counts in the averages only if its current menu shows both a price and a weight for a single steak. Restaurants that price by the person, by the table or by market weight are listed in 4.4 but not averaged. Wagyu, sharing cuts (T-bone, porterhouse, tomahawk, côte de boeuf, chateaubriand) lunch or set-menu prices, and steaks sold only by weight (per 100g, kg or lb) were left out. Where a menu offers several sizes, we used the size closest to the most common size for that cut on the other menus (10oz ribeye and striploin, 8oz fillet).

Conversion. ECB reference rates: £1 = €1.1951 (23 Nov 2026), $1 = €0.9122 (24 Nov 2026), 1 SEK = €0.0890 (EUR/SEK 11.2375, 23 Nov 2026). 1 oz = 28.35g. € per 100g = price in € / weight in g × 100. US menu prices exclude sales tax (around 9 to 10%) and a customary 18 to 20% tip.

4.3 Menu sources

Every price comes from the restaurant's own website or its own menu PDF. No prices are taken from booking sites or third-party menu sites. Two Dublin prices first read on OpenTable (Marco Pierre White and Hellfire) were rechecked on the restaurants' own websites on 25 Nov 2026; Marco Pierre White's prices had gone up and the official figures are used.

6. About this study

The figures in this study are our best estimates, based on the data available to us when we compiled it in November 2026. Search volumes are modelled estimates from Ahrefs and Semrush, not exact counts, and the two tools often disagree, so close rankings could change with different data or methods. Only category searches were used; searches for individual restaurants by name were not.

Prices come from restaurants' own published menus on the dates listed in section 4.3 and may have changed since, so please check with the restaurant before you book. Averages rest on small samples (three to seven steakhouses per region and cut) and on the selection rules set out in section 4, which are judgement calls.

We believe the study is accurate and fairly presented on the basis of that data, but it involves judgement calls that are open to debate, and it is published for general information only. Restaurant names are used only to identify the menus we checked and do not imply any affiliation or endorsement.

If you think something is wrong, contact us at https://steakhousedublin.ie/contact/ and we will review it and correct the study where needed. You may quote figures from this study with a link to steakhousedublin.ie.
